Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 9/24/2008 has been entered.

Authorization for this examiner's amendment was given in a telephone interview with Lisa Norton (Reg. No. 44,977) on 6/5/08.

The application has been amended as follows:

The personal computer includes an internal firewall configured to allow and/or deny access to portions of the microchip both to the user of the personal computer and to a user of the microchip from the network of computers during a shared use of the microchip; and the internal firewall is configured to deny access to portions of the microchip from the network of computers.

***Terminal Disclaimer***

6. The terminal disclaimers filed on 1/28/2008 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of the following patent(s) and/or application(s) have been reviewed and is accepted. The terminal disclaimers have been recorded.

7. The Examiner would like to note that Applicant has several pending applications, filed after the present application, that appear to claim similar subject matter to the claims of the present application. Since the present application has an earlier filing date than those applications, it has been passed to issue. ***Allowable Subject Matter***

8. Claims 9, 10, 12-18, 20, 22, 25-27, 30-42, 53, 55-57, 61-64 and 66-103 (now renumbered 1-73) are allowed.

9. The following is an examiner's statement of reasons for allowance. These reasons for allowance should not be interpreted to imply that limitations not specifically mentioned are immaterial to patentability. The specific limitations identified below have been considered in combination with the entirety of the claim in determining patentability.

Art Unit: 2448

The prior art of record fails to disclose of fairly suggest a system comprising a personal computer (or server computer) with at least one microchip and at least one internal firewall configured to allow and/or deny access to *portions* of the at least one microchip *both* to a user of the personal computer and a user of the microchip from a network to which the computer is connected, during a shared use of the microchip.
